9. Checkpoint

9.1 Check Point Technologies Infinity Total Protection

CheckPoint Infinity Total Protection

CheckPoint Infinity Total Protection is a comprehensive security solution that provides protection against advanced persistent threats (APT), data loss, and insider threats. It is designed to protect enterprise networks and data from a wide range of threats, including zero-day attacks, malware, and ransomware.

CheckPoint Infinity Total Protection is built on a multi-layered security architecture that includes:

- Network Security:** Protects the network perimeter and internal network segments from external threats.
- Endpoint Security:** Protects endpoints (laptops, smartphones, etc.) from malware and other threats.
- Cloud Security:** Protects cloud applications and data from threats.
- Mobile Security:** Protects mobile devices and data from threats.
- Insider Threat Protection:** Detects and prevents insider threats, such as data loss and misuse.

CheckPoint Infinity Total Protection is designed to be easy to manage and integrate with existing IT infrastructure. It provides a single console for managing all security policies and configurations, making it a cost-effective solution for enterprises.

9.2 Check Point SandBlast NSS Labs

Check Point SandBlast NSS Labs (TCO) No

Check Point SandBlast NSS Labs is a security solution that provides protection against advanced persistent threats (APT), data loss, and insider threats. It is designed to protect enterprise networks and data from a wide range of threats, including zero-day attacks, malware, and ransomware.

Check Point SandBlast NSS Labs is built on a multi-layered security architecture that includes:

- Network Security:** Protects the network perimeter and internal network segments from external threats.
- Endpoint Security:** Protects endpoints (laptops, smartphones, etc.) from malware and other threats.
- Cloud Security:** Protects cloud applications and data from threats.
- Mobile Security:** Protects mobile devices and data from threats.
- Insider Threat Protection:** Detects and prevents insider threats, such as data loss and misuse.

Check Point SandBlast NSS Labs is designed to be easy to manage and integrate with existing IT infrastructure. It provides a single console for managing all security policies and configurations, making it a cost-effective solution for enterprises.
